Advanced Python: Homework set 13

2023/2024

This task extends the application created in the previous task lists. You can get up to 6 points for completing all subtasks.

Program appropriate decorators or context managers to decorate or run already created service methods in the context

A speed up the generation of responses to the same requests using the local cache;

B make selected services available only to logged-in users. Completing this subsection requires extending the application with a list of users with passwords and a login mechanism. You can assume that the list of users with passwords is static and the passwords themselves are stored unencrypted.

Complete the set of unit tests to check the correct operation of subsection (B). And this is the last task list.
